

Eurex Circular 026/19

New High Precision Timestamp All File Service for Eurex

Deutsche Börse Group is enhancing the High Precision Timestamp (HPT) product suite with the offering of the new HPT All File Service. The new information product is an extension of the existing HPT file service from executions only to all market data updates.

The network timestamp is captured at the outer boundary of the exchange's network and offers valuable insights into trading system dynamics. The data is available for all Eurex futures. Eurex options will be added at a later date.

For more information or to subscribe to the new file service, please contact mds.analytics@deutsche-boerse.com.
