Summary:

In Eurex Clearing circular 095/13, Eurex Clearing provided further details on the timeline of the decommissioning of the MISS infrastructure and VALUES API. The decommissioning will be performed as planned on **10 December 2013**.

In accordance with this timeline, Eurex Clearing already decommissioned the MISS Infrastructure and VALUES API in the simulation environment effective 13 November 2013.

This circular provides further information on the MISS & VALUES API decommissioning and on the migration from the MISS-based legacy trading GUI, @X-ceed GUI to the T7 Trader GUI for using EurexOTC Trade Entry services.

Update on the MISS & VALUES API decommissioning, details on migration of EurexOTC Trade Entry services from @X-ceed to T7 Trader GUI

In Eurex Clearing circular 095/13, Eurex Clearing provided further details on the timeline for the decommissioning of the MISS infrastructure and VALUES API.

In accordance with the timeline outlined in the circular mentioned above, Eurex Clearing has already decommissioned the MISS Infrastructure and VALUES API in the simulation environment on 13 November 2013, marking the last preparatory step towards the final decommissioning in production on 10 December 2013.

As previously announced in related circulars, the @X-tract GUI has to be accessed via WebTrading and back office software solutions have to be based on the Eurex Clearing FIXML Interface from this date onwards.

Please note that Non-Clearing Members (NCMs) that have outsourced their back office functionality to other companies are also affected by the decommissioning, as NCMs are required to provide WebTrading certificates to their insourcer.

Besides the back office-related MISS and VALUES API usage, Trading Participants and Clearing Members (CMs) continue to use the MISS-based @X-ceed (legacy trading) GUI for the full range of EurexOTC Trade Entry services for listed derivatives business. To enable Trading Participants and CMs to completely decommission their Eurex MISSes, Eurex will offer the full range of EurexOTC Trade Entry services on the T7 Trader GUI as part of T7 Release 2.0, which will be launched in production on 25 November 2013. The full range of EurexOTC Trade Entry services is already available in the simulation environment. Please refer to the **Implementation News** of Eurex Exchange and circulars related toT7 Release 2.0 for the most recent updates and further information on this topic.

To ensure a smooth migration, Trading Participants and CMs using EurexOTC Trade Entry services are advised to prepare the migration from the @X-ceed GUI to the T7 Trader GUI for OTC users well before 25 November 2013. Prior to the full inclusion of EurexOTC Trade Entry services, the T7 Trader GUI can already be set up for affected users, as the respective GUI update, containing the full EurexOTC functionality, will then automatically be provided. Eurex has provided a **document** describing the setup of OTC users within the T7 Trader GUI in detail.

As previously announced in Eurex circular **110/13**, the Eurex legacy interfaces, i.e. Enhanced Broadcast Solution (EBS) and Enhanced Transaction Solution (ETS), will be decommissioned **at the end of December 2013**. The exact schedule will be communicated separately at a later point in time.

Please also note that Eurex Clearing requires a **Readiness Statement** for the decommissioning of the MISS infrastructure and VALUES API to be submitted via e-mail to the personal Key Account Manager or to the Fax number given on the statement by 26 November 2013.

If you have any questions regarding the decommissioning of the MISS infrastructure and VALUES API, please do not hesitate to contact the Markets Services Team.
