Eurex Clearing will offer WebsphereMQ as connection alternative to the Eurex Clearing FpML Interface for EurexOTC and the Eurex Clearing FIXML Interface for derivatives. WebsphereMQ will be supported for the simulation and production environments with effect from **March 2013**. This connection alternative is provided in addition to the standard connection via AMQP (Advance Message Queuing Protocol). For the Eurex Clearing FpML Interface, WebsphereMQ is already supported in simulation and production.

Following requests from Members, Eurex Clearing will offer WebsphereMQ as connection alternative in addition to the standard connection via AMQP (Advance Message Queuing Protocol), preferred by Eurex Clearing. The WebsphereMQ connection offered by Eurex Clearing is based on a server-to-server connection via the established z/OS connection to the data processing centres of Deutsche Börse. This connection will be offered by Deutsche Börse, the service provider of Eurex Clearing. It requires conclusion of a network service basic agreement. Members who select a WebsphereMQ connection will be migrated stepwise to this additional connection alternative.

The current client-to-server technology will no longer be offered for the Eurex Clearing FpML Interface.

As of **February 2013**, the updated documents regarding WebsphereMQ will be available for download in the Member Section of the Eurex Clearing website www.eurexclearing.com under the following links:
