Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

The official closing auction price of the on the last cum trading day will be the basis for determination of the R-factor. The R-factor will be determined with eight decimal places. It is calculated in the following way:

$$R = \left(\frac{\text{number of existing shares}}{\text{number of resulting shares}} * \left(1 - \frac{\text{issue price of new shares}}{\text{closing auction price}} \right) \right) + \frac{\text{issue price of new shares}}{\text{closing auction price}}$$

Options

Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor.
- The contracts size will be divided by the R-factor.
- The version number of the existing series will be increased by one.
Adjusted strike prices and contract sizes will be published via the Eurex-Website www.eurexchange.com immediately after close of trading on the last cum trading day under:
Products > equity derivatives > corporate actions
- New series with standard contract size 100 and version number 0 will be introduced effective the ex date.
- All existing orders and quotes will be deleted after close of trading on the last cum trading day. The adjustment also refers to existing positions in TES flexible options.

Futures

1. Adjustment of contract size and variation margin

- The adjustment uses the same R-factor as used for options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
Contract size new = contract size old / R-factor
- All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract will be introduced with standard contract size 100 and new product code ISPH. Furthermore, a new futures contract on dividends with standard contract size 1000 and new product code I3SP will be introduced.
- The exact introduction date will be published via a circular.
- As soon as the new contract is available for trading and there are no more contract months with open interest in the original contract, trading in this contract will be put on "HALT" and finally discontinued.
- Furthermore, no new contract months will be introduced in the original contracts (ISPG/I2SP). Existing contract months without open interest will be suspended from trading.

If there is no open interest on the last cum trading day after close of trading in the original contract (ISPG/I2SP), no adjustment will be made and no new contract will be introduced.
