A new SSL/TLS certificate will be installed on the AMQP brokers used for the Eurex Clearing FpML Interface in simulation. It will replace the existing certificate which is approaching its expiration date.

The certificate will be signed by the Comodo Certification Authority (CA). The root and intermediate certificates of the CA can be downloaded at www.comodo.com. The new public key can be downloaded from the Member Section of the Eurex Clearing website www.eurexclearing.com via the following path:

**Technology > EurexOTC Clear > Network Access > Eurex Clearing FpML Interface > FpML Interface Certificates > Eurex Clearing FpML Interface - Certificates for Simulation (valid as of 2 July 2016)**

In order to make the client application accept the server certificates during the connection establishment, the public keys of the AMQP brokers or the public keys of the CA must be installed on the client side and the client application has to be able to access the certificate(s). Most AMQP clients are able to work with multiple certificates at the same time. Therefore it should be possible to download the public keys in advance. The client will then automatically be able to select between the old and new certificate.

More details about the SSL/TLS configuration of different AMQP libraries can be found in Volume B of Eurex Clearing Messaging Interfaces documentation.

The new certificate will be activated in the simulation environment after the end of day batch of 1 July 2016.
