The implementation of the network configuration changes for the introduction of Eurex Exchange's T7 last mile redundancy, which was originally scheduled for Saturday 21 September 2013, will now take place on **Saturday 26 October 2013**.

Following the network changes, an optional connection test will be offered between 3pm and 5pm CET. The T7 production system will be available during this time for connectivity testing on the ETI, MDI, EMDI interfaces and via T7 Admin GUI and T7 Trader GUI. The FIX Gateways will not be available for testing.

The Enhanced Network Connectivity will offer access to both sides of the Trading Gateway, FIX Gateway and Common Report Engine infrastructure via a Eurex MIC and to both sides of the GUI Proxy Server infrastructure via a Eurex GUI Channel. In future this implementation will be offered as the standard for installations connected via redundant Ethernet WAN circuits. For more information regarding the changes please refer to the Eurex circulars 110/13 and 194/13.

If you have any questions or require further information regarding the introduction of the last mile redundancy, please contact your Technical Key Account Manager using your VIP number or via e-mail to: cts@eurexchange.com.
