Determination of adjustment factor (R-factor)

S1	Closing auction price of the share
S2	S1 minus regular dividend
S3	S2 minus special dividend
R-factor	$S3 / S2$

Futures

1. Adjustment of contract size and variation margin

- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
Contract size new = contract size old / R-factor
- All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract will be introduced with standard contract size 1000 and new product code LLOI.
- The exact introduction date will be published via a circular.
- As soon as the new contract is available for trading and there are no more contract months with open interest in the original contract, trading in this contract will be put on "HALT" and finally discontinued.
- Furthermore, no new contract months will be introduced in the original contract LLOG and LLOH.

If there is no open interest on the last cum trading day after close of trading in the original contracts LLOG and LLOH, no adjustment will be made and no new contract will be introduced.
