Summary:

1. Eurex Release 10.0: Optional software fix for production

Today, **Thursday, November 29, 2007**, Eurex will publish an optional software fix for the Eurex Release 10.0 production environment.

The software fix, for the Eurex broadcast server, eases the handling of gaps detected in Eurex unreliable broadcast streams. The installation of the software fix is highly recommended for all members using third party applications which make use of gap detection within all unreliable private broadcast streams.

The software fix will be made available from the member section of the Eurex website and can be used in production with immediate effect.

2. Activation of the alphanumeric Order ID / Trade ID functionality

The introduction of the alphanumeric Order ID and Trade ID originally planned for Tuesday, November 27, 2007 has been rescheduled to **Monday, December 10, 2007.**

1. Eurex Release 10.0: Optional software fix for production

Today, Thursday, November 29, 2007, Eurex will publish an optional software fix for the Eurex Release 10.0 production environment.

The software fix for the Eurex broadcast server eases the handling of gaps detected in Eurex unreliable broadcast streams. Its installation is highly recommended for all members using third party applications which make use of gap detection within all unreliable private broadcast streams.

As with previous Eurex releases, the Eurex® system generates certain gaps for private unreliable broadcast streams for technical reasons. However, these broadcast gaps do not have any functional relevance. An example for such a gap is the first gap message in an unreliable broadcast stream of the day.

After the application of the software fix the number of broadcasts which are generated for technical reasons will be significantly reduced. As a result of this change a VALUES application will no longer be able to assume that the first private unreliable broadcast received will generate at least one gap message. The software fix also affects applications running in backwards compatibility mode. Members are strongly advised to contact their software vendors before applying the fix to the MISS server.

Please Note: Members who make exclusive use of the Eurex MISS and Workstation software are not required to apply the software fix immediately.

The software fix is contained in the following archives

- **SUN Solaris:** **eurexr100_hf20071129.tar.Z**
- **MS Windows:** **eurexr100_hf20071129.zip**

which will be made available for download from the Eurex website on Thursday, November 29, 2007 under the following path:

www.eurexchange.com > Member Section > Releases > Eurex 10.0 > Software Kits > Production Kits

The software fix can be used in production with immediate effect and must be installed according to the instructions contained in the “readme” file.

In order to enable members to test the software fix prior to the installation in production, the software fix can also be applied to the simulation environment. The simulation will be re-opened immediately after the batch run on Thursday, November 29, 2007 to facilitate members’ testing activities. Before installation of the replacement files, a back-up copy of the old versions should be made.

Please ensure that the software fix is applied to all MISSes of a particular MISS group.

2. Activation of the alphanumeric Order ID / Trade ID functionality

The introduction of the alphanumeric Order ID and Trade ID originally planned for Tuesday, November 27, 2007 has been rescheduled to Monday, December 10, 2007

If you have any questions concerning the installation of the files, please contact our Customer Technical Support under tel. +49-69-211-1 12 00.

Should you experience difficulties logging in to the “Member Section”, please contact Customer Support on tel. +49-69-211-1 17 00.
