

Dividend Derivatives

Eurex is the world's main market for dividend futures. A result achieved by our undivided attention to detail, proven by our product innovation, transparency, margin benefits and corporate action treatment.

TRADE THE DIVIDENDS OF SINGLE STOCKS OR ENTIRE STOCK INDEXES

Dividends are a key factor for equity and equity derivatives holders. Given their significant impact on the value of an instrument, there is considerable demand for tools to manage and hedge dividend exposure.

Especially in a low-yield environment, the demand for dividends increases as yields and opportunities for dividend growth are more attractive.

In addition to Single Stock Dividend Futures, Equity Index Dividend Futures offer the possibility to invest in a specific region or industry sector.

HEDGE DIVIDEND RISK

Dividend Derivatives allow investors to take positions in, or hedge, future dividend payments particularly for structured products and equity options.

What are the key benefits?

Transparency

Ensured through order book trading with onscreen liquidity and through standardized product features.

Margin benefits

Trade dividend derivatives with other equity and index derivatives within PRISMA for higher netting effects.

Security

Avoid counterparty risk with listed derivatives and clearing through the CCP.

Diversification

More diversification opportunities through an extended product range and the possibility to trade different contracts at the same time.
