In their session on July 14, 2004, the Management Boards of Eurex Deutschland and Eurex Zürich have decided to increase the contract size of Telia Sonera (TLSN). The current contract size of Telia Sonera is 100 shares per contract. With effect from **August 23, 2004** the contract size will be increased to 500 shares per contract. The aims of this measure are to adjust the Telia Sonera contract size to a level comparable with other Eurex stock options and to ensure a contract value that is suited to all Eurex clients.

The adjustment will be made after close of trading on August 20, 2004 by entering capital adjustment transaction type 594 with an adjustment factor (R-factor) of 1. The version number of existing series will be in creased by 1 and there will be no change to their exercise prices or contract sizes. As of **August 23, 2004**, new series will be introduced with version number 0 and a contract size of 500.

After close of trading on August 20, 2004, all series with a contract size of 100 and without any open interest will be deleted. Furthermore trading will be discontinued immediately for any series with a contract size of 100 as soon as there is no more open interest.

Please note that all orders and quotes will be deleted after close of trading on August 20, 2004.
