Summary:

With Eurex Release 7.0, the quality of market data will be further improved. As described in the Eurex Release 7.0 Technical Release Notes, broadcast information will be transmitted at shorter intervals. For the highly liquid futures contracts the broadcast rates for inside market and order book depth will be tripled.

This circular includes a list of the products concerned.

Eurex Release 7.0 - Increased Broadcast Rate for Inside Market and Order Book Depth

With Eurex Release 7.0, the quality of market data will be further improved. As described in the Eurex Release 7.0 Technical Release Notes, broadcast information will be transmitted at shorter intervals.

For the highly liquid futures contracts the broadcast rates for inside market and order book depth will be tripled. Upon decision of the Management Boards of Eurex Deutschland and Eurex Zürich, these broadcast rates can be further increased in the future.

No additional bandwidth will be required for existing MISS connections.

However, LAN traffic might grow and should be constantly monitored. It is therefore highly recommended to test your system capacity by using the Eurex Release 7.0 Simulation.

Please find below the list of the products concerned. These products are already available for testing in Eurex Release 7.0 Simulation.
