Eurex Will Launch Euro Inflation Futures in January 2008

Eurex will be launching euro inflation futures on January 21, 2008. The futures contract will be based on the unrevised Harmonized Index of Consumer Prices (HICP) excluding tobacco, which measures inflation in the Eurozone. With this product, Eurex is adding a new asset class to its product suite. Exchange-traded inflation futures complement the existing markets of inflation-linked cash products and OTC derivatives, which have seen rapidly growing volumes. Eurex is the first European derivatives exchange to offer inflation futures.

Inflation futures will be traded on Eurex for the first time with a specific market model to accommodate the fact that inflation and inflation expectations are subject to minor changes during the day: Liquidity will be concentrated in two daily auctions of 15 minutes – opening and closing – where Market Makers will provide liquidity. During continuous trading Market Makers will quote upon request.

The growth of the European inflation markets has boosted the demand from market participants for efficient and low-cost hedging instruments (derivatives) for managing short term inflation risks. The new Eurex inflation futures also help the market to calculate prices for derivatives on forward inflation-linked bonds which in a next step can be used to build up an inflation-linked bond options market.

The underlying HICP is an important measure of consumer price inflation in the Eurozone and serves as a guide for monetary policy. The HICP is calculated monthly by the Statistical Office of the European Communities (Eurostat).

Inflation-linked instruments have already been available on Eurex Bonds since March 2006. The electronic trading platform (www.eurex-bonds.com) – operated by Eurex in cooperation with leading international trading firms – offers inflation-linked government bonds of France, Greece, Italy and Germany. The latter already generated turnover of almost EUR 10 billion (single counted) since introduction, EUR 7.2 billion already during the first ten months of 2007.

For more information, please refer to the Eurex website at www.eurexchange.com or contact Murat Baygeldi on T +44-20-78 62-72 30, e-mail: Murat.Baygeldi@eurexchange.com.

New Market Maker Obligations for Equity Options

With effect from November 1, 2007, Eurex has changed the requirements for Market Makers in equity options, thus further enhancing quality of the electronic order book in this segment.

Minimum quote sizes have largely been reduced for German, Swiss, French and Dutch equity options, taking into account both trading activity in the Eurex electronic order book and liquidity in the respective underlying instrument. At the same time, the maximum Market Maker spreads have been harmonized across Eurex's entire equity options segment, removing the previous distinction between EUR-denominated and CHF-denominated products in this respect. The number of different spread classes has therefore been considerably reduced to only seven, and the overall Market-Making scheme simplified.

For any further information, please feel free to contact Sascha Semroch on
T +49-69-211-1 50 78, e-mail: Sascha.Semroch@eurexchange.com.

New Eurex Interfaces "Enhanced Broadcast Solution" and "Enhanced Transaction Solution" Allow for Improved Connectivity

On December 3, 2007 – shortly after the introduction of Eurex Release 10.0 on November 26, 2007 – Eurex will introduce the "Enhanced Broadcast Solution", which is the next step in the implementation of the Eurex Technology Roadmap.

Initiated in the first quarter of 2006, the improvements in the Eurex Technology Roadmap address major trends observed in electronic derivatives trading. With its technology roadmap, Eurex preempts new requirements by constantly tuning its systems to accelerate trading speed and throughput, upgrading system capacity, enhancing real-time information distribution, and improving interfaces and risk management.

Examples of an enhancement already introduced within the framework of the Eurex Technology Roadmap were the introduction of new system hardware in 2006 and the upgrade of the Eurex network: the bandwidth was upgraded to 1 mbit/s. In combination with various software enhancements, these measures have already significantly improved the system's performance; the average round trip time of orders and quotes has been lowered by two-thirds for the whole network.

Eurex Enhanced Broadcast Solution – Interface for Dissemination of Public Market Data
The Enhanced Broadcast Solution is an optional interface available to all members and will introduce a new high-performance, functionally enhanced market information broadcast mechanism for the dissemination of unnetted public market data. It will be provided in parallel to the existing New Socket Data Feed, which will give members the opportunity to migrate over a period of time. The parallel support for the Eurex New Socket Data Feed "XFI" – to be replaced by the new interface – will be withdrawn on June 30, 2008.

Key Functional Innovations

- **Order Book Depth for Options Products:** The Enhanced Broadcast Solution will be able to distribute additional order book depth for options products. Currently only the best bid and best ask prices are broadcasted for options.

- **Enhanced Order Book Depth for Futures Products:** The Enhanced Broadcast Solution will provide extended order book depth for all futures products. Currently no more than ten price levels are maintained for selected futures products.

- **Individual Subscription Model:** Through the Enhanced Broadcast Solution products will be grouped into product groups or "streams" (for example German equity options, Swiss equity options et cetera) whereby individual products may occur in more than one product group.

- **Flexible Configuration:** The setup of the Enhanced Broadcast Solution is flexible and can be easily adapted by clients according to changing market requirements. Eurex is able to modify the following parameters on a daily basis:
  - Addition of new product groups and association of products to groups
  - Market depth provided per product
  - Number of market depth streams and their depths (for example 1; 2-10; 11-20)
  - Multicast addresses of the individual streams
  - Interval at which snapshot broadcasts are published

In addition to functional improvements, technical enhancements are another important feature of the new Eurex Enhanced Broadcast Solution.

Key Technical Innovations

- **Low Latency:** The Enhanced Broadcast Solution will optimize the complete market data distribution and will minimize latency between an event occurring and the related market information broadcast being seen by members. The high-speed data distribution mechanism will be implemented using the state-of-the-art IP multicast protocol.

- **"Low Footprint" Solution:** No front-end software will be provided by the exchange. Participants will be able to utilize the Enhanced Broadcast Solution independent of their operating system, compiler version and programming language. In addition, the Enhanced Broadcast Solution does not impose any specific hardware requirements and therefore provides members with the opportunity to easily integrate the new interface into their existing IT infrastructure.

- **Close to Industry Standards:** The Enhanced Broadcast Solution uses a high performance protocol which is close to the FIX 5.0 protocol and can effectively be used by members or vendors in developing their own applications. The FAST protocol will be used for the data compression.

- **Market Data Dissemination Concept:** The delivery mechanism for market data via the Enhanced Broadcast Solution is based on the subscription model principle. A reference data stream will distribute appropriate information concerning all products including mapping between product, book depth and the respective multicast address. Member applications can automatically process this information on a daily basis and make a manual reconfiguration unnecessary in the event of any changes. Market data will be disseminated in the form of complete order book information broadcasts (Snapshot Broadcasts) which will be provided at periodic intervals and continuous order book updates (Delta Broadcasts) that will be broadcast in parallel.

Eurex Enhanced Transaction Solution – Optimized Interface for Trading
Following the Enhanced Broadcast Solution's introduction, during the first half of 2008 Eurex will launch its new optional trading interface, Enhanced Transaction Solution.

Due to the changing market environment, especially the current trend towards algorithmic trading, the need to offer a new interface providing a low latency access to Eurex Trading Services has emerged during the last few years.

The design of the Enhanced Transaction Solution will also facilitate the integration of future functional enhancements. The new interface will cover the following functional features:
- Low latency requirements
- Easy to use and comprehensible application protocol description
- Functional layouts with a small footprint: low number of application requests and data fields
- Alignment with the industry protocol standard FIX

More information on the interfaces will be available in the near future. Members are kept informed of all upcoming technological updates via circulars as well as additional publications that will be distributed and posted on **www.eurexchange.com**. For more information, please refer to the Eurex website at **www.eurexchange.com > Technology**, or contact Tobias Knobbe on T +49-69-211-1 23 39, e-mail: Tobias.Knobbe@eurexchange.com.

Out Soon: A Practical Textbook on Derivatives

In close cooperation with Eurex, the German Nürtingen-Geislingen University has prepared an introduction to the world of derivatives trading, which particularly stands out due to its hands-on approach.

The 300-page publication entitled "Derivatives. An authorative guide to derivatives for financial intermediaries and investors", specifically targets academic newcomers, but also professionals as well as private investors who wish to extend their knowledge of derivates trading. In 17 chapters, the authors – Michael Bloss and Prof. Dr. Dr. Dietmar Ernst – lead through the universe of key instruments and strategies, including various portfolio construction techniques. Finally, the question-and-answer chapter at the end gives readers the opportunity to test their newly acquired knowledge on the basis of examples.

The German version ("Derivate. Handbuch für Finanzintermediäre und Investoren") will be on sale in bookshops from December 17, 2007, with the English edition to follow at the beginning of next year. The publication is already available for pre-booking with Oldenbourg Wissenschaftsverlag: www.oldenbourg-wissenschaftsverlag.de.

Global Emission Rights Trading

Emission rights trading has established itself as a key instrument to effectively reign in greenhouse gas emissions. Through the joint product initiative of EEX, the European Energy Exchange, and Eurex on CO_2 trading, an important foundation will be laid for the enlargement and diversification of the world's largest market for emission allowances – the EU Emissions Trading Scheme (EU ETS). In the following article, Sebastian Gallehr, Managing Director of GALLEHR+Partner and an expert in energy and risk management, provides a general insight into the emergence of emissions trading, with a focus on the latest developments in Europe.

The First World Climate Conference held in Geneva in 1979 marked the first occasion on which the human influence on climate changes were discussed for the first time. At the time, the particular attention of the international community was drawn to the increase of carbon dioxide in the atmosphere, citing the potential long-term changes to the global climate. The results of the investigation on the human impact on world climate formed the basis of the United Nations Framework Convention on Climate Change (UNFCCC), signed at the Earth Summit in Rio de Janeiro in 1992.

- Emissions of greenhouse gases such as carbon dioxide (CO_2) affect the climate.
- Climate change is a global issue, irrespective of the emissions' source location.
- Emissions develop their climate effects in the atmosphere only with a time lag of 20 years.

With the Kyoto Protocol[1], which was adopted by 186 countries during the Third Conference of Parties to the UNFCCC in 1997, the industrialized world agreed to commit itself to a reduction in its greenhouse gas emissions. To realize this commitment, a comprehensive scheme designed to manage emission quantities was adopted. This includes the requirement for developed countries to submit an internationally recognized emission certificate for each emitted ton of greenhouse gas.

These are supplemented by so-called project-based Kyoto mechanisms which allow for emission credits arising from individual climate protection projects to be used for the fulfillment of reduction obligations. These project-based mechanisms do not work according to the principles of cap-and-trade[2] such as emissions trading, but rather in line with the so-called baseline-and-credit system[3].

Tradable Emission Rights Within the Scope of the Kyoto Protocol

Acronym	Long Name	Description	Validity under EU ETS
CER	Certified Emission Reductions	Emission reduction units from Clean Development Mechanism (CDM) projects	Deductible from 2008, depending on NAP
ERU	Emission Reduction Units	Emission reductions from Joint Implementation (JI) projects	Deductible from 2008, depending on NAP
EUA	EU Emission Allowances	EU emission allowances assigned within the scope of the EU ETS	Fully deductible, tradable since 2005

[1] For more detailed information on the Kyoto Protocol, please refer to http://unfccc.int/kyoto_protocol/items/2830.php.

[2] With the cap-and-trade approach, a certain maximum quantity (cap) of permitted overall emissions is stipulated for the entire trading scheme, with such caps being broken down into individual emission rights and allocated to the various obligors, i.e. carbon-producing enterprises. Companies subject to this obligation can emit beyond their respective cap levels if they hold the necessary emission rights (source: www.co2-handel.de).

[3] Under the baseline-and-credit system, the emission situation without consideration of the relevant avoidance project serves as a reference scenario (baseline). The number of generated emission rights (credits) is determined from the difference between the underlying reference scenario and actual project emissions. Companies typically leverage lower marginal avoidance costs in other countries, in order to be able to meet their reduction obligations more cost-effectively (source: www.co2-handel.de).

EU ETS – the EU's Emissions Trading Scheme

The European Emissions Trading Scheme (EU ETS) represents the worldwide reference model for a standardized scheme to trade CO_2 emission allowances. It encompasses individually coordinated allocation plans of all EU member states and is by far the largest market for emission allowances.

Since January 1, 2005, all EU member states have been obliged to submit a National Allocation Plan (NAP) at the beginning of each so-called emissions trading period. The plan stipulates the extent to which every major carbon-producing entity of the respective country may emit greenhouse gases over a certain period of time. Where an entity emits more carbon than is actually allowed, it must purchase additional emission rights, or will be sanctioned. The unit in European emissions trading is one EU Allowance (EUA), entitling the holder to emit one ton of carbon dioxide.

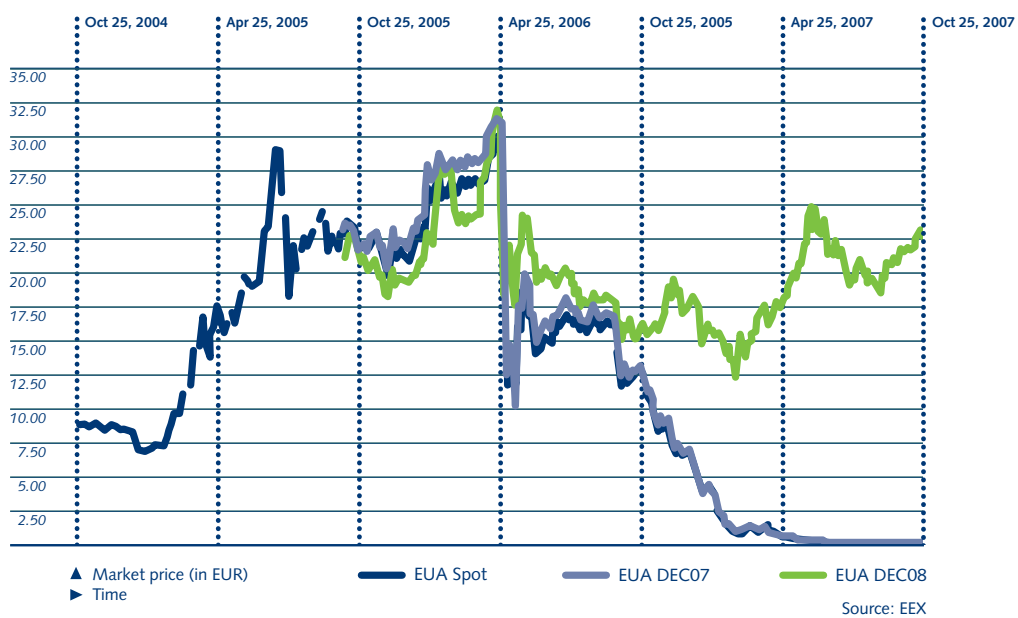

Within the European Union, the first emissions trading period (from 2005 through 2007) is regarded as a pilot phase for implementing the obligations under the Kyoto Protocol. The objective of the second stage (which will run from 2008 to 2012) is to reach the climate protection targets undertaken by all EU member states regarding the greenhouse gases referred to in the Kyoto Protocol. There are plans to include hitherto unconsidered sectors – such as the aviation industry – in the EU trading scheme in the future. Specific details of international agreements on climate protection post 2012 will be on the agenda of the next World Climate Conference, which will be held in Bali in December 2007.

Besides the EU ETS, other emissions trading programs such as the Western Regional Climate Action Initiative (WRCAI) and Regional Greenhouse Gas Initiative (RGGI) in the U.S. are also evolving. As the world's largest carbon market, the EU ETS has the potential to become the nucleus of global emissions trading.

Price Developments

The following chart outlines the price trend of emission allowances since 2004[4].

Development of EUA Prices at EEX

Source: EEX

[4] Trading in EUAs at EEX commenced in March 2005. Underlying prices for the preceding period have been derived from the expectations and views of market participants prior to the start of trading (OTC European Carbon Index, published on www.eex.com).

After trading started in 2005, EUA spot prices temporarily rose from EUR 7/EUA to above EUR 30/EUA. Then, in April 2006, the announcement of real emissions for 2005 – several EU member states had actually reported an excess of emission allowances – triggered a sharp slump in prices. Following a brief rebound of the market until the fall of 2006, prices resumed their downward trend. On October 26, 2007, one ton of CO_2 traded at EUR 0.04 in the EUA spot market of the European Energy Exchange.

To counter a renewed over-allocation as seen during the first trading period, the National Allocation Plans of virtually all EU member states have been cut by the EU Commission for the second trading period (2008 through 2012). Meanwhile, since mid-2006, the annual futures contract for 2008 has been trading steadily in the range between EUR 12 and EUR 25 per ton of CO_2.

Development in Traded Volumes

Trading in emission allowances has considerably accelerated since the launch of the EU Emissions Trading Scheme on January 1, 2005. According to the World Bank, a total of nine million EUAs were traded in 2004. Within the first emissions trading period, volumes had been rising from 362 million tons of CO_2 since 2005 to a total of 1,017 million tons in 2006. For the current year, Point Carbon projects a further increase in trading volumes to around 1,750 million tons of CO_2.

Besides the market for EUAs, trading of emission rights from project-based Kyoto mechanisms (CDM/JI) also offers great potential for growth. In particular, this holds true for Certified Emission Reductions (CERs). According to the IPCC[5], a total of 84.5 million CERs have so far been generated from relevant CDM (Clean Development Mechanism) projects. By 2012, the Panel expects worldwide issuance to exceed 2.2 billion CERs.

With the steady rise in trading volumes, the number and range of participants in the spot and derivatives markets has also been gradually increasing. In addition to power-generating utilities, industrial companies and local utilities, there are now a growing number of banks, financial services providers and hedge funds which also participate in emissions trading. The strong interest from financial sector participants greatly benefits liquidity levels on the exchanges.

The product cooperation in emission rights trading between EEX and Eurex takes these developments into account: From its operational start on December 5, 2007, Eurex participants will gain easier access to the EEX market for emission rights. Thus the cooperation will connect market participants from the global energy and financial markets via a well-established, monitored and very powerful financial market architecture.

For further information on the joint product initiative of EEX and Eurex on CO_2 trading, please refer to our website **www.eurexchange.com**, or contact Manuela Arbuckle on T +44-207-862-72 26, e-mail: Manuela.Arbuckle@eurexchange.com.

Status as of October 31, 2007

Trading Volumes at Eurex up by 22 Percent to 146 Million Contracts

- **Equity index derivatives segment with strongest growth of 53 percent year-on-year**
- **Interest rate derivatives strongest segment with 61 million contracts**

A total of 146 million contracts were traded on Eurex in October, a year-on-year increase of 22 percent (October 2006: 119 million contracts). Approximately 1.61 billion contracts were traded year-to-date, surpassing last year's overall volume of 1.527 billion contracts. Open interest remains stable and reached 134 million contracts at the end of October.

The strongest growth was seen in the equity index derivatives segment, which rose by 53 percent to 58.4 million contracts (October 2006: 38.3 million contracts). The Dow Jones EURO STOXX 50® Index Futures saw around 24 million contracts, an increase of 54 percent (October 2006: 15.4 million contracts); turnover of the option increased even more by 66 percent achieving 22 million contracts.

The equity derivatives segment (equity options and single stock futures) recorded 26.6 million contracts (October 2006: 23.7 million), a growth of 12 percent year-on-year. Growth drivers were predominantly single stock futures, which increased significantly over October 2006 with 157 percent. Around 24.4 million contracts were traded in equity options.

The interest rate derivatives segment was the largest in terms of turnover in October with approximately 61 million contracts (October 2006: 57.4 million), an increase of 6 percent year-on-year. The strongest traded single derivative was once again the Euro-Bund Futures contract with more than 26 million contracts, followed by the Euro-Schatz Futures contract with 14.4 million contracts.

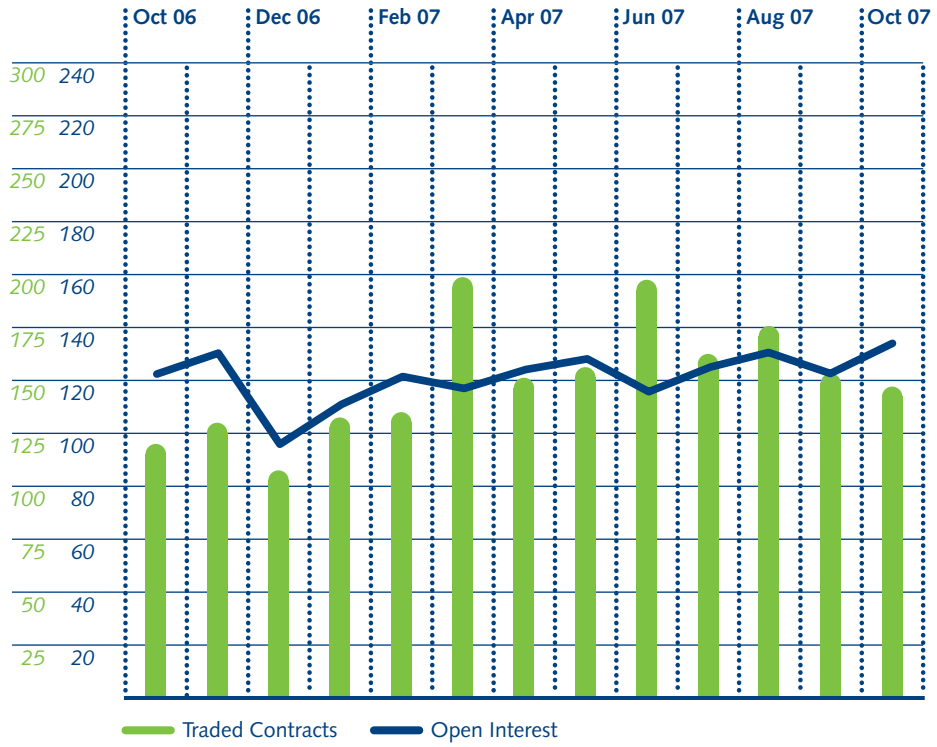

Eurex Repo, which operates CHF- and EUR repo markets, set in October in its money market segment Euro GC Pooling® a new daily record with daily outstanding volume of EUR 24.1 billion on October 24. Average outstanding volume in October reached EUR 16.8 billion, a plus of 21 percent year-on-year (October 2006: EUR 13.9 billion). All Eurex Repo markets recorded an average outstanding volume of EUR 85 billion under difficult market conditions in October (October 2006: EUR 88.9 billion).

Approximately EUR 11.5 billion (single counting) was traded in October on the Eurex Bonds electronic trading platform, which rounds out Eurex's range of interest rate derivatives, compared to EUR 13 billion in October 2006. Trading volume in September 2007 was EUR 11.3 billion.
