Emerging Market Products: Eurex Launches Derivatives on the Most Liquid Russian Blue Chips

On April 23, 2007, Eurex will be introducing derivatives on Russian underlyings, thereby offering attractive investment and diversification opportunities on the emerging markets for the first time. The new Russian derivatives – an index futures contract, 16 equity futures and four equity options – will be traded in U.S. dollars, another first innovation at Eurex. All fees for the new products – including any trading, clearing and settlement fees – will be waived from their launch until the end of July 2007.

Key Figures Feb (insert)

Considered as one of the most interesting economies for investors looking for new trading and hedging opportunities, Russia ranks among the world's ten largest stock markets, with a market capitalization of more than USD 1,000 billion.

With the launch of Russian index and equity derivatives, Eurex will offer opportunities for market participants to gain exposure to the performance of an economy that is continually growing above-average. The new products also enable them to hedge their investments in Russian blue chips with exchange-traded instruments.

Easy Access to the Russian Stock Market

With futures contracts on the newly introduced RDXxt® USD – RDX Extended Index, Eurex provides easy access to the Russian stock market. The index reflects real time movements of the 15 most actively traded depositary receipts (DRs) on Russian blue chips. DRs allow market participants outside of Russia to invest in Russian corporations.

The RDXxt® USD Index: CFTC- and UCITS-compliant

The new RDXxt® USD – RDX Extended Index is a capitalization-weighted index, calculated by Wiener Börse AG (Vienna Stock Exchange), a recognized provider of Eastern European and Russian indexes. The RDXxt® USD Index represents an extension of the well-established RDX® USD Index from 11 to 15 constituents and allows for a higher diversification than the original index. Thus, the RDXxt® USD Index basically meets the CFTC requirements of a broad-based index, which is crucial for product approval in the USA. Eurex plans to apply for CFTC approval of the new RDXxt® USD Index Futures contract. At the same time, the new index is fully UCITS-compliant, which facilitates the use by institutional fund management companies in Europe.

All index constituents are exchange listed DRs selected by liquidity of the depositary receipt, market capitalization and significance of the underlying stocks, price availability of the depositary receipt, sector representativeness and market interest. The index composition will be reviewed twice a year,

in March and September. The maximum weighting per index component is capped at ten percent. The weighting factors will be reviewed and adjusted quarterly. The index will not be adjusted due to dividend payments.

The RDXxt® USD Index: Structure and Available Derivatives on the Constituents

Security Name	Price in USD	Capitalization in USD	Weighting in Percent	Underlying ISIN	Single Stock Futures – Product ID	Contract Size	Equity Options – Product ID	Contract Size

(As of February 27, 2007)

Single Stock Futures on All Index Constituents

In addition to the futures contract on the RDXxt® USD Index, Eurex offers Single Stock Futures on all 15 index constituents as well as on the DRs of X5 Retail Group. Depending on the underlying, the contracts comprise 50, 100 or 500 DRs. Available contract months are the next twelve consecutive calendar months as well as the two following expiry dates of the December cycle. For each contract, market participants may therefore choose among 14 different maturity dates. This helps to facilitate portfolio management, and as such can contribute greatly to performance optimization. All new Single Stock Futures on Russian DRs are cash settled in U.S. dollars. OTC Block Trade fee caps will be applied, as per other Eurex Single Stock Futures, at 1,000 contracts.

Options on the Most Important Russian DRs

Investors can also trade options on four of the most-traded Russian DRs at Eurex, granting easy direct access to the Russian market. All of them – DRs on the stocks of Gazprom, Lukoil, Norilsk Nickel and Surgutneftegaz – are included in the RDXxt® USD Index. Trading, clearing and physical delivery of the new options are in accordance with globally accepted standards. In line with the current practice in the OTC markets, Russian equity options are European-style and may only be exercised on the Last Trading Day.

Participation in the Russian Market with All the Benefits of Exchange Trading

By introducing derivatives on DRs, and not on the stocks of Russian blue chips themselves, Eurex is also allowing market participants outside of Russia to participate in the growth of an interesting emerging market. Trading, clearing and settlement of the new Russian derivatives is performed in accordance with globally accepted standards and offers typical Eurex advantages: high liquidity due to large numbers of market participants, cost-efficient straight-through processing and the greatest

possible elimination of counterparty risk through Eurex Clearing. The new products will be supported by Market-Making programs in order to guarantee good spreads from the very first trading day. All fees for trading, clearing and settlement in Russian derivatives will be waived until July 31, 2007 to give interested market participants an initial helping hand.

Comprehensive information on the Russian derivatives that are tradable on Eurex is available at **www.eurexchange.com > Trading > Products > New Equity Derivatives/New Equity Index Derivatives**; for further information contact Christine Heyde, T +49-69-211-15698, e-mail: Christine.Heyde@eurexchange.com, or Tobias Ehinger, T +41-5 88 54-23 08, e-mail: Tobias.Ehinger@eurexchange.com.

Nine New Single Stock Futures Listed on German Stocks

Market participants will be able to trade futures on the preference shares of BMW, MAN, Metro, RWE and Volkswagen, and on the ordinary shares of Henkel from March 19, 2007. In addition, Single Stock Futures on Douglas Holding, Norddeutsche Affinerie and Techem will also be available as of the same date. Thus futures contracts on 380 underlying stocks from 14 European countries will be available for trading at Eurex.

With more than 55 million contracts traded in 2006, Eurex has evolved into Europe's leading marketplace for Single Stock Futures with an average 45 percent market share across the key European Single Stock Futures markets. This trend has continued into 2007: During the first two months of the year, 5.8 million contracts changed hands, more than ten times traded volumes during the same period of the previous year.

The contract specifications of the new Single Stock Futures are in line with those of existing ones:

Futures on	ISIN of the Underlying Instrument	Eurex Country Code	Eurex Product ID	Contract Size	Minimum Price Change
BMW*	DE0005190037	DE	BM3F	100	0.01

For detailed contract specifications of all Eurex Single Stock Futures, please refer to the Eurex website **www.eurexchange.com > Trading > Products > Equity Derivatives > Single Stock Futures**. For any further information, please feel free to contact Dr. Weiwei Wang, T +49-69-211-17262, e-mail: Weiwei.Wang@eurexchange.com.

Successful Launch of Spanish Equity Options

On November 20, 2006, Eurex launched the first six equity options based on Spanish shares. By mid-March 2007, more than 90,000 of these options were already traded, with open interest standing at about 54,000 contracts at the time.

During the first 15 weeks since the launch of the segment, the most traded new options were those on the shares of Spanish Telefónica and Banco Bilbao Vizcaya Argentaria, followed by Banco Santander Central Hispano, Iberdrola, and Repsol YPF.

Both Advanced and Permanent Market Makers ensure the provision of continuous quotations in all Spanish equity options with lifetimes of up to 18 months.

For detailed information, please refer to **www.eurexchange.com > Trading > Products > Equity Derivatives > Equity Options > Selection by Country**. In case of further questions, please feel free to contact Christine Heyde, T +49-69-211-15698, e-mail: Christine.Heyde@eurexchange.com.

INTEREST RATE DERIVATIVES

Introduction of Half-Size Ticks for Calendar Spreads to Reduce Rollover Cost

Eurex will reduce the minimum price change (tick size) of combined orders in Euro-Bund and Euro-Bobl Futures from 0.01 percent to 0.005, with effect from May 21, 2007. Implied transaction costs for rolling over a futures position into the next maturity will thus be reduced from EUR 10 to EUR 5 per contract. At the same time, the reduced pricing interval will enhance trading opportunities for market participants.

Combined (or "combination") orders for futures contracts comprise two individual orders entered simultaneously for the purchase and sale of the same amount of contracts of different maturities of the same product. Such "calendar spreads" are often used for closing out a position in a maturing contract, and to simultaneously enter into a longer maturity. Reducing the tick size will halve the implied transaction costs incurred with such a rollover trade.

The present price interval of 0.01 percent of the nominal value applicable for single orders will generally remain unaffected by the announced reduction. Due to the integration of combined order books with individual order books (and the related synthetic pricing mechanism), single-maturity books may contain synthetic orders at the reduced price interval. Order execution at a reduced price interval in individual order books is possible either by entering a limit order with the restriction "immediate-or-cancel", or by entering the next possible higher or lower price limit (higher for buy orders, lower for sell orders).

Example:
Individual orders in the June contract month, together with combined orders in the June/September spread, will result in the following synthetic individual orders in the September contract:

	Bid Quantity	Bid	Ask	Ask Quantity
JUN	50	100.000	100.000	100
JUN/SEP	30	0.010	0.015	20
SEP	20	99.985	100.000	30

In order to sell 20 contracts at a price of exactly 99.985, an exchange participant must mark his limit order at 99.985 with the execution restriction "immediate-or-cancel". If an unrestricted limit sell order is entered at the next possible full price interval (in this example, at 99.98), the order will also be executed at 99.985, provided the synthetic buy order is still available at this price.

For any further information, please feel free to contact Nadja Urban, T +49-69-211-151 05, e-mail: Nadja.Urban@eurexchange.com.

Credit Futures Also Eligible for OTC Facilities

The Eurex OTC Trade Facilities – specifically, Block Trade, Exchange for Swaps (EFS) and Exchange for Physicals (EFPI) – will be available for iTraxx® Credit Futures, with effect from contract launch on March 27, 2007. Eurex also announced a transaction fee holiday for all credit futures trades, until April 30, 2007 inclusive. These measures are designed to promote maximum liquidity and trading flexibility, right from the launch of the new products.

Market participants can use the Exchange for Physicals Facility to enter iTraxx® Credit Futures trades related to cash market trades into the Eurex® system. In principle, any EUR-denominated bond can be used for this purpose. EFPs require a high degree of price correlation between the futures contract and the underlying asset, to ensure that the futures contract serves as an appropriate hedge for the underlying.

The use of EFPIs is envisaged to facilitate buying or selling a block of non-government bonds whereby the credit risk exposure is to be generically hedged using iTraxx® Credit Futures. When entering into trades involving corporate bonds, the interest rate risk is usually neutralized through a cross-hedge against an appropriate government bond such as a Bund or an OAT. The Eurex OTC Trade Facility allows for a simultaneous iTraxx® Credit Futures hedge, to neutralize generic credit risk.

OTC Facilities Offer Maximum Flexibility
The new iTraxx® Credit Futures will also be eligible for the Exchange for Swaps Facility, allowing market participants to enter iTraxx® Credit Futures into the Eurex® system as a direct hedge against a Credit

Default Swap concluded in the OTC market. In other words, participants will be able to enter into the futures trade directly against their swap counterparty (or futures broker), subsequently entering it into the system.

This will enable market participants to trade the basis – for example, between the underlying iTraxx® Europe 5-year Index and the corresponding futures contract. This will not only allow traders to exploit arbitrage opportunities, but will also ensure that the futures price remains closely in line with the underlying market – very similar to basis trading in other Eurex futures contracts. Moreover, this will facilitate switching into (and out of) OTC contracts, offering a very flexible way to implement investment or hedging opportunities. Furthermore, the EFS function also allows for the posting of futures in a scenario where the iTraxx® Credit Futures leg is itself used as a hedge, for example as a delta hedge against OTC iTraxx® options, or iTraxx® index tranches.

Minimum Size for OTC Block Trades

OTC Block Trades will require the following minimum contract quantities:

	Minimum Size for OTC Block Trades
iTraxx® Europe 5-Year Index Futures	2,500
iTraxx® Europe Hi Vol 5-Year Index Futures	1,500
iTraxx® Europe Crossover 5-Year Index Futures	1,000
Single-Name Credit Recovery Futures	100

The Conditions for Utilization governing the OTC Trade Entry Functionality is available on the Eurex website **www.eurexchange.com > Trading > Market Model > Wholesale Trading**. For any further information, please feel free to contact Mehtap Dinc, T +49-69-211-1 72 84, e-mail: Mehtap.Dinc@eurexchange.com, or Stuart Heath, T +44-20-78 62-72 53, e-mail: Stuart.Heath@eurexchange.com.

Bloomberg Calculation Model to Price Eurex Credit Futures

Eurex will use a new Bloomberg model to calculate the final settlement prices of its new iTraxx® Credit Futures, which will be launched on March 27. These prices will be displayed and can be analyzed on the Bloomberg Professional® service. The support of this new product category by industry leaders Eurex and Bloomberg will open new opportunities in a growing asset class.

Bloomberg, the leading global provider of analytics, news and data to the financial industry, is the leading analytical system in the credit derivatives realm and launched its own proprietary calculation model for single name credit default swaps (CDS) and CDS indices and options in January 2007. The model has been developed by Bloomberg's team of quantitative analysts and enables highly precise price determination for CDS and similar instruments. It can be selected on CDSW, the single name and index pricing tool, under Models, and is the pricing engine behind the new function FCDS (available as of March 27).

For any further information, please contact Stuart Heath, T +44-20-78 62-72 53, e-mail: Stuart.Heath@eurexchange.com.

Memorandum of Understanding with Korea Exchange Opens up Cooperation Opportunities for Derivatives

At the end of January, the Korea Exchange (KRX) and Deutsche Börse AG signed a memorandum of understanding agreeing closer cooperation and communication. This joint letter of intent is a further step towards Deutsche Börse Group's expansion of its business in Asia. It opens up opportunities for successful cooperation in areas including the derivatives business.

The two parties agreed to share information, encourage staff exchanges, and support one another in the marketing of IPOs. The letter of intent also states that a joint team is to be set up to assess the possibility of cooperation in the derivatives market.

The Korea Exchange is very similar in structure to the Deutsche Börse Group model, with integrated cash and derivatives markets. The two parties are working together to further develop their business on various different markets.

Both Deutsche Börse and Eurex see considerable potential for growth in the region. Eurex has had an access point in Singapore since February 2006, which one participant is already using for trading. Other participants in Singapore and Australia are currently being linked. Eurex also received authorization for direct memberships in Hong Kong and Japan last year, enabling it to offer its services in the Asia-Pacific region, too.

For any further information, please contact Orlando Chiesa, T +49-69-211-13021, e-mail: Orlando.Chiesa@eurexchange.com.

Status as of February 28, 2007

Trading Volume on Eurex Increased by 26 Percent Year-on-Year to 135 Million Contracts

- **New daily turnover record of 12.8 million contracts**
- **Equity-based derivatives with strongest growth – up 41 percent year-on-year**
- **Interest rate options up 35 percent year-on-year**

The international derivatives exchange Eurex traded 135.7 million contracts in February, an increase of over 26 percent as against February 2006 (108 million contracts). On 28 February, Eurex reached a new daily turnover record with 12.8 million contracts (previous record from June 13, 2006 stood at 12.2 million). The average daily turnover in February was 6.7 million contracts.

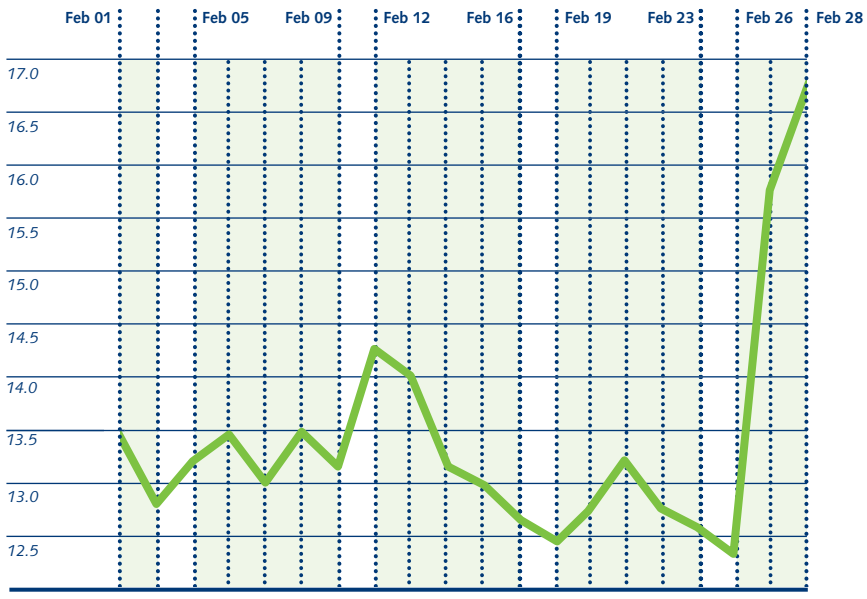

Additional evidence for sustained growth on Eurex comes from open interest, which has increased further. Open interest reached a value of 118.5 million contracts at the end of February, as against almost 110 million at the end of January 2007.

Equity-based derivatives once again showed strong growth – the number of contracts traded was up by 41 percent year-on-year to 72 million (February 2006: 51 million contracts), 46.6 million of which were equity index derivatives and 25.6 million of which were equity options. The options on the Dow Jones EURO STOXX 50® Index reached a new record turnover of around 18 million contracts (previous record: 16.5 million in June 2006). There is strong demand for the Spanish equity options introduced in November 2006; turnover grew by 176 percent as against the previous month with approximately 35,000 contracts. Single stock futures also contributed to the strong growth, with a 15-fold increase in volume year-on-year, reaching 2.4 million contracts.

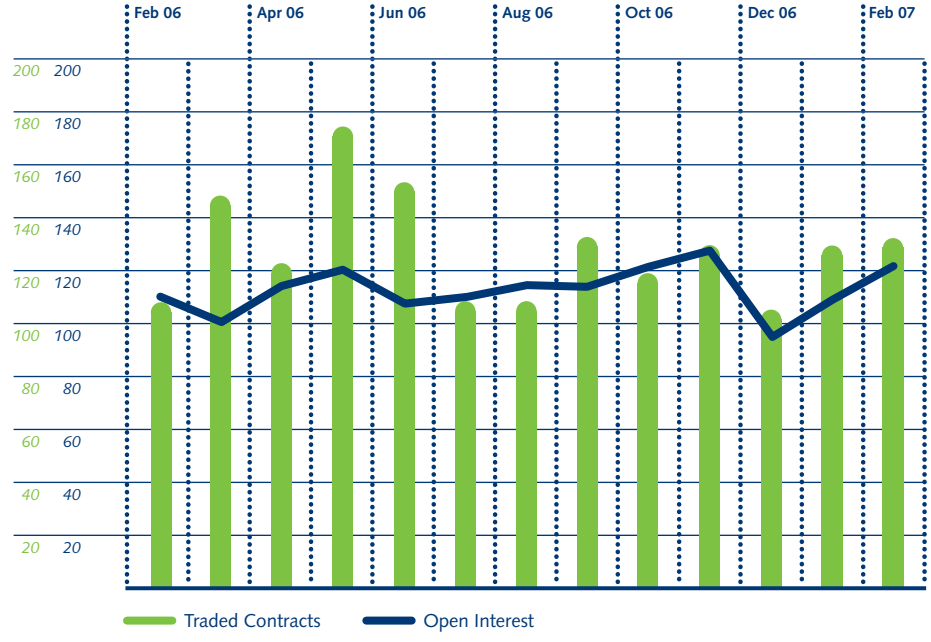

The interest rate derivatives segment achieved 63 million contracts (February 2006: 56 million contracts). Around 27 million contracts were traded on the Euro-Bund Futures, which remain to be the top traded derivatives on Eurex. In the Euro-Schatz Futures, around 15 million contracts were traded. Year-on-year, the largest percentage increases related to the options in this segment with plus 35 percent to 7 million contracts. Open interest on interest rate options rose by an even more impressive 57 percent year-on-year to 2.3 million contracts.

The electronic trading platform Eurex Bonds, which rounds out Eurex's interest rate derivatives product range, recorded a volume of EUR 11.4 billion (single counting) in February, after EUR 12.1 billion in the same month last year. Trade with German government bonds continued to rise in February, reaching EUR 9.5 billion (January 2007: EUR 9.2 billion).
