We would like to inform you about two serious problems reported by SUN, which might occur with Solaris 10 HW Release 3/05 and HW 1/06. Please find below the impact description as provided by SUN.

SUN Bug-ID 6348751
Under normal operations, multicast routers send a membership query to clients and clients that are members of the multicast group respond with a membership report. After some time (can be after two days) the query packets are not responded to. After a short period of time with no membership reports, routers will stop forwarding multicast traffic to this client.

Sun Alert-ID 102304
On a Solaris 10 system with patch 118822-29 or 118822-30 installed, the system will have incompatible modules and may suffer from unpredictable behavior, possible system panics, and/or memory corruption.

To avoid such problems, we strongly recommend downloading and installing the SUN Solaris 10 Kernel Patch 118833-17, taking into consideration the stated pre-requisites.

Should you require any further details, please do not hesitate to contact the Technical Helpdesk at tel. +49-69-211-1 12 00.
