The company **Électricité de France SA** has announced a rights issue whereby shareholders are entitled to purchase 2 new share(s) for every 13 share(s) held, at a subscription price of 6.35 per new share.

More information about this transaction is available on the company's website under www.edf.fr.

The rights issue will result in an adjustment of the above-mentioned contracts.

Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

The official closing auction price of the on the last cum trading day will be the basis for determination of the R-factor. The R-factor will be determined with eight decimal places. It is calculated in the following way:

$$R = \left(\frac{\text{number of existing shares}}{\text{number of resulting shares}} * \left(1 - \frac{\text{issue price of new shares}}{\text{closing auction price}} \right) \right) + \frac{\text{issue price of new shares}}{\text{closing auction price}}$$

Options

Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor.
- The contracts size will be divided by the R-factor.
- The version number of the existing series will be increased by one.
Immediately after close of trading on the last cum trading day, adjusted strike prices and contract sizes will be published on www.eurex.com in section **Rules & Regs > Corporate actions > Corporate action information**
- New series with standard contract size 100 and version number 0 will be introduced effective the ex-date.
- All existing orders and quotes will be deleted after close of trading on the last cum trading day. The adjustment also refers to existing positions in TES flexible options.

Exercises

- Upon exercise of an adjusted series, cash settlement will be made for the fractional part of the new contract size.

Futures

1. Adjustment of contract size and variation margin

- The adjustment uses the same R-factor as used for options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
Contract size new = contract size old / R-factor
- All outstanding orders and quotes will be deleted after close of trading on the last cum trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract with standard contract size 100, and a new Total Return futures contract with standard contract size 100 will be introduced. Furthermore, a new futures contract on dividends with standard contract size 1000 will be introduced.
- The exact introduction date will be published via a circular.
- As soon as there are no more contract months with open interest in the adjusted contract, trading in this contract will be put on "HALT" and finally discontinued.

- Furthermore, no new contract months will be introduced in the adjusted contracts.

If there is no open interest on the last cum trading day after close of trading in one of the original contracts E2FG/TE2F/E3DF, no adjustment will be made for this contract and no new contract will be introduced to replace this.
