The *"Member Front End Development Guide - Programming Version*" is the updated version of the VALUES API description and contains detailed information about application requests, subscriptions and responses which will be offered with Xetra Release 9.0. The final version of the interface specification will be published at a later point in time. The existing programming version shows the current planning status.

The *"XML Report Reference Manual - Programming Version"* offers an overview of the reports that are available in XML format and additional text reports generated from these. These text reports will replace the current standard reports. As of Xetra Release 9.0, XML reports will be the only supported machine-readable report format. Raw data reports will no longer be available.
