➲ IT / System Administration ➲ Security Coordination	Course description and schedule

The impact of the introduction of Eurex Release 5.0 on Eurex system training courses was presented in Circular 034/01.

As of 26 September, 2001, Eurex system training courses will cover the additional functionality of Eurex Release 5.0.

In addition to the existing system training courses for trading and clearing, Eurex now provides a system training 'Security' course, giving users the opportunity to become acquainted with the new graphical user interface used for setting up and administering access authorizations, including trader/product assignments, in Release 5.0.

In order to assist security coordinators to prepare for Release 5.0, Eurex is offering additional half-day security courses from the end of September 2001 onwards. A list of scheduled dates and the current course description are provided in the attachment. The course fee is EUR 200.00 per person.

The learning portal at "https://trainingscenter.deutsche-boerse.com" provides a complete overview of all Eurex courses and also supports on-line registration.

Finally, we would like to point out that additional information concerning the changes to Resource Access Levels will be published shortly with the final version of the technical release notes.

Eurex System Training - Security

The training course will be conducted by qualified trainers with years of practical experience with the security functions of the Eurex System.

The course is composed of lectures, on-line presentations and hands-on practice with the system.

The course is designed for staff of exchange members who have been appointed as the security coordinator and have little or no knowledge of how to set up and administer User Ids in the Eurex system. Basic knowledge of futures and options as well as trading and clearing at Eurex is desirable.

This course gives participants a general overview of the system and familiarizes them on-line with all relevant security functions and screens in the Eurex system. Additionally, the process of registering users will be discussed in detail. All necessary technical equipment is available, thus creating optimal conditions for hands-on training in a simulated market environment.

Course Content

- Tasks and Responsibilities of the Security Coordinator
- Eurex System Security Functions
- Creation/Modification/Deletion of User Ids
- Framework for Requirements for Different User Set-ups
  - Trader
  - Trader Assistant
