Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

S1	Closing auction price of the share
S2	S1 minus ordinary dividend
S3	S2 minus special dividend
R-Factor	S3/S2

Options

1. Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor. Strike prices will be rounded using mathematical rounding conventions to the number of decimal places according to their listing standard.
- The contract size will be divided by the R-factor.
- The version number of the existing series will be increased by one.
  Immediately after close of trading on the last cum-trading day, adjusted strike prices and contract sizes will be published on www.eurex.com in section
  Rules & Regs > Corporate actions > Corporate action information
- New series with standard contract size 100 and version number 0 will be introduced effective the ex-date.
- All existing orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible options. The existing flex strikes will be rounded using mathematical rounding conventions, to four decimal places.

2. Exercises

- Upon exercise of an adjusted series cash settlement will be made for the fractional part of the new contract size.

Futures

1. Adjustment of contract size and variation margin

- The adjustment is done via the same R-factor as for the Options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum-trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:
  Contract size new = contract size old / R-factor
- All outstanding orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- A new single stock futures contract with standard contract size 100 will be introduced.
- The exact introduction date will be published via a circular.
- As soon there are no more contract months with open interest in the adjusted contract, trading in this contract will be put on “HALT” and finally discontinued.
- Furthermore, no new contract months will be introduced in the adjusted contracts.

If there is no open interest on the last cum-trading day after close of trading in one of the original contracts, no adjustment will be made for these contracts and no new contract will be introduced to replace this.
