- The version number of the existing series will be increased by one.

## Futures

### 1. Adjustment of contract size and variation margin

- The adjustment is done via the same R-factor as for the Options.
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum-trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows:  $\text{Contract size new} = \text{contract size old} / \text{R-factor}$ .
- All outstanding orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible futures.

### 2. Introduction of a new contract

- A new single stock futures contract with standard contract size of 100 and a new dividends futures contract with standard contract size of 1000 will be introduced.
- The exact introduction date will be published via a circular.
- As soon as there is no more open interest in the adjusted contracts, trading in this contract will be discontinued.
- Furthermore, no new contract months will be introduced in the adjusted contracts.

**Should there be no open interest on the last cum-trading day after close of trading in one of the original contracts, no adjustment will be made to these contracts and no successor contract will be introduced.**
