

Mini Single Stock Options

Same stocks, same liquidity – just smaller.

Eurex introduces Mini Single Stock Options (Mini SSOs) on leading European equities, enabling investors to optimize capital allocations, fine-tune risk management strategies, and access high-priced stocks with lower notional exposure. These contracts offer the same underlying, transparency, and liquidity as standard options - just with a smaller multiplier for greater flexibility.

PRECISION MEETS FLEXIBILITY

European equity markets feature many high-priced shares, making traditional option contracts capital-intensive for investors. Mini SSOs address this challenge by offering a smaller contract size while maintaining the same transparency and liquidity as standard options. With a reduced multiplier, these instruments enable more precise position sizing, improved capital efficiency, and tactical risk management strategies.

Available on leading European equities such as ASML, Rheinmetall, Hermès, and other high-priced names, Mini SSOs provide an accessible way to trade without compromising on market depth or execution quality. Combined with Eurex's robust T7 trading architecture and broad member network, these contracts deliver the flexibility and efficiency modern investors demand.

What are the key benefits?

Lower notional exposure

Trade options on high-priced European shares such as Rheinmetall or Hermès with significantly reduced notional exposure per contract.

Enhanced capital efficiency

Ideal for fine-tuning risk management or implementing tactical strategies on high-priced stocks, Mini SSOs enable precise position sizing.

Same underlying, smaller multiplier

Benefit from the same transparency and liquidity as standard options, but with a fraction of the contract size.

Contract specifications

Product ID	Exercise style	Name	Underlying ISIN	Bloomberg code	Currency	Spot price*	Contract multiplier
HMI2	American	Hermes International SCA (mini)	FR0000052292	RMS FP Equity <OMON>	EUR	2,081	10
