Futures contracts on dividends of stocks	

The company Skanska AB has announced the payment of a special dividend of SEK 5.50 per share in addition to a regular cash dividend of SEK 8.50 share.

More information about this transaction is available on the company's website.

The payment of the special dividend will result in an adjustment of the above-mentioned contracts.

## Procedure

### R-Factor Method

Determination of adjustment factor (R-factor)

S1	Closing auction price of the share
S2	S1 minus regular dividend
S3	S2 minus special dividend
R-Factor	$S3/S2$

## Options

### 1. Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor. Strike prices will be rounded using mathematical rounding conventions to the number of decimal places according to their listing standard.
- The contracts size will be divided by the R-factor. In case the adjustment of the trading unit results in a lot size that is not an increment of one share, the adjusted lot size will be rounded to the nearest whole share. An equalization payment will be made to neutralize the effect of rounding.
- The version number of the existing series will be increased by one.
- Immediately after close of trading on the last cum-trading day, adjusted strike prices and contract sizes will be published on [www.eurex.com](http://www.eurex.com) in section **Rules & Regs > Corporate actions > Corporate action information**
- New series with standard contract size 100 and version number 0 will be introduced effective the ex-date.
- All existing orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible options. The existing flex strikes will be rounded using mathematical rounding conventions, to four decimal places.
  
- **If there is no open interest on the last cum-trading day after close of trading in one of the original contracts, no adjustment will be made for these contracts.**
