1 Introduction

This document describes all the reports distributed for Eurex Derivatives Clearing and European Commodity Clearing.

This document is intended for the staff dealing with reports. The purpose of the Eurex Clearing XML Reports – Reference Manual is

- to explain the content of the reports, and
- to describe each report in detail.

Additional information related to generic text reports is included.

Please note that all Eurex derivatives trading, derivatives clearing and EEX derivatives reports are provided exclusively via the Common Report Engine.

All C7 reports are distributed to Eurex members in accordance with the functionalities covered by the latest software version used.

2 XML Reports Concepts used by Eurex

In this chapter the main concepts of the XML Reports offered by Eurex are explained.

2.1 Eurex Terminology

Throughout the Eurex XML Reports documentation, specific terms are used to refer to certain objects known to the Eurex system. To avoid misunderstandings the most important terms are described in this paragraph.

The term **product** refers to a set of options or futures contracts, all based on the same specific underlying security or other value (an underlying), that have been admitted to trading at the Eurex Exchanges (e.g., futures on the German Stock Index DAX, options on the registered stock of BMW). A product is identified by its product Id, e.g. "FGBL".

The term **underlying** is, in each case, the point of reference for the product (e.g., the underlying of the product FDAX is the German Stock Index DAX; the underlying of the product options on the registered stock of BMW is the registered stock of BMW).

A **futures contract** is uniquely defined with the fields product Id, contract expiration month and contract expiration year. An **option contract** is uniquely defined with the fields product Id, contract class code, contract expiration month, contract expiration year, strike price (or contract exercise price) and version number.

A **futures combination** is uniquely defined by its two future contract legs. Both legs share the same product.

A **strategy** is uniquely defined by its strategy type and up to four legs, each determined by a buy/sell indicator, an option or futures contract specification, a strategy leg underlying price and a strategy leg volume.

A **flexible option** is uniquely defined by its product Id, contract class code, contract expiration date, strike price, version number, exercise style (european/american option) and settlement type (cash/physical).

A **flexible future** is uniquely defined by its product Id, contract expiration date and settlement type.

2.2 XML Report Layout

The XML Report layout consists of the basic elements structures, structure members and data types.

2.2.1 Structures

Structures are ordered collections of structure members.

They may contain fields and/or substructures as members, forming a structure tree. On top level (the root of each structure tree) there is the main report structure.

Most structures are defined as a part of one report. Structures used in several reports are called common structures.

Naming conventions for structures are:

<i>reportName</i>	Main structure of a report
<i>reportName***Grp</i>	Sub structure of a report
<i>reportName***KeyGrp</i>	Sub structure of a report which contains key fields

2.2.2 Structure Members

A structure member is either a field or another (sub-)structure. A structure member may be enriched by attributes to define report specific properties.

Fields are defined by their data type and share the name of their data type. Substructures may occur once or multiple times in a structure. The name of a substructure member is equal to the substructure name.

Each field and structure occurs at a specific place in the sequence of fields in the substructure tree of a report. Substructure can represent an exception, in the sense that they can occur multiple times.

Structure members may be mandatory or optional. Optional members may be omitted in the XML report.

2.2.3 Data Types

Data Types describe context-independent properties of a field, like its format and length. The format of a data type may be alphanumeric, numeric or signed numeric.

These properties are independent of the report where a field with this data type occurs. Since a field in a structure must have the same name as its data type, this implies that two fields with the same name always have the same data type.

2.2.4 Rules for creating the XML Structure

2.2.4.1 Main Report Structure

The report XML structure is enclosed in the tag

```
<reportName>
  <reptHeader>
    ...
  </reptHeader>
  <reportNameGrp>
    ...
  </reportNameGrp>
</reportName>
```

2.2.4.2 Substructures

Substructures are written as follows:

```

<structureName>
    ...
</structureName>

```

The structure members occur in the sequence as they are defined in the XML Report layout. Optional members may be omitted, if they contain no data.

In case of a multiple occurrence, the <structureName> element is repeated.

2.2.4.3 Field Values

Field values are written as

```
<fieldName>fieldValue</fieldName>
```

or, if no value is given for a mandatory field,

```
<fieldName/>
```

Optional fields are omitted if no value is given.

Alphanumeric field values are written to the XML Report with their complete field length.

Examples:

```
<prodId>OSMI</prodId>
```

```
<ordrText>430-11172 </ordrText>
```

Numeric values with precision 0 are written in the format DD...D without leading zeroes (D denotes a digit 0, 1, ..., 9).

Example:

```
<sumTrnLngQty>558</sumTrnLngQty>
```

Numeric values with precision > 0 are written in the format DD...D.D...D, where the number of trailing digits is given by the precision.

Example:

```
<valPerTick>1.0000</valPerTick>
```

Signed numeric values are prefixed with a plus ('+') or minus ('--') sign.

Example:

```
<sumPrmVmarAmnt>-88880.00</sumPrmVmarAmnt>
```

2.2.5 Rules for Text Reports

The text reports created from the XML reports serve to display the contained data in a human readable format. Only the XML reports are suitable for automatic processing.

Eurex strongly advises against any form of text report processing, e.g. by parsing data from the text report content.

The following sections describe some generic rules how the layout of the text reports is determined from the XML report structure.

2.2.5.1 Generic Text Report Structure

The creation of generic text reports uses the following rules:

- The global layout of a generic text report is determined by the XML report data structure.
- Data rows are shown in the sequence defined in the XML report.
- Fields are shown in the sequence defined in the XML report.
- Column widths are determined by the maximum of heading length and data field length.
- Column headings are written into one line.
- Spacing between columns is always one.
- Underlines (indicating the column width) are provided for the field width of the first row.
- Lines are wrapped, if they are longer than 132 characters.
- Starting position for wrapped lines is one character indented from second field on the first line.

2.2.5.2 Field Values

The display of field values adheres to the following rules:

- The field value display is determined by the field specific format and the specific report context.
- The field column heading is determined by the field, dependent of the report context.
- Alphanumeric values are displayed left justified with the original value retrieved from the XML Report data. Depending on the specific report, values from the XML reports are mapped to some decode in the text report.
- Numeric values are displayed right justified according to their field specific display format with the original value retrieved from the XML Report data.

The specific rules for numeric values are

- The decimal separator is a point.
- No leading zeroes are displayed.
- All decimal digits given by the field precision are displayed (e.g. 1.200 for precision 3).
- "Minus signs" are written as prefix or suffix of the number, or as long/short indicator.
- It is possible to have a thousand separator for the text format (e.g. 12,345,678.90).

2.3 Common Report Engine

The Common Report Engine is the exclusive source for report files and theoretical price files for Eurex trading participants, Eurex clearing members and participants of the EEX Derivatives Market. It is an FTP solution based on an SFTP report server that allows participants to easily retrieve all of their reports from a single source.

All transactional and participant specific reports are available in a participant-specific directory structure. Non-transactional and non-participant specific reports and files are available in the public area. Such reports are tagged as **CRE Area : public** in this manual .

The Common Report Engine can be accessed via leased line connectivity or via the internet.

In order to access the Common Report Engine, a specific user account for the Common Reporting Engine must be setup and a public key has to be uploaded in the Member Section of the Eurex website (www.eurex.com/ec-en).

Please note that reports will only be generated for participants if an activated Common Report Engine user account exists.

The participant is responsible for the user account setup on the Common Report Engine for all markets applicable.

Detailed information to the Common Report Engine is provided in the Common Report Engine User Guide on the Eurex Homepage:

www.eurex.com/ec-en/ > Support > Technology> Common Report Engine

3 Introduction to XML Reports

3.1 XML Report Characteristics

The XML report descriptions contain the following information:

Description	A textual description of the functional contents of the report.
Frequency	The frequency or the specific events at which the report is created.
Availability	The group of members (e.g. clearing members, trading members) to which the report is available. Please refer to <i>section 3.2</i> for a detailed description of report availability.
Clearing House	The group of clearing houses to which the report is available.
Report Format	The group of report formats (e.g. XML, CSV) at which the report is created.
XML Report Structure	A description of the composition of groups and tags that are used with the XML report. Underlined items represent groups; the contained tags are identified by indent level. Additional information is provided on the cardinality of subgroups. Please refer to <i>section 3.3</i> for a description of cardinalities.
M/O	A usage code to indicate whether a report tag is mandatory or optional. Please refer to <i>section 3.4</i> for a detailed description.
Text Report Heading	The heading of each tag when printed in a text report. The heading depends on the tag, but may be defined different in a specific report context. Tags bound together in a group may be concatenated under one heading. If the text report heading is marked “(XML only)”, the tag content is not written into the text report.
Text Report Structure	A generic description of the layout that is used with the text report. Each text report field is printed once with his heading and the generic text format which is used to display the value. Alphanumeric values are filled up with X, according to the field length. Numeric values are filled up with 9, together with thousand separators, decimal points and signs if applicable. Please remark that the layout of text reports may be subject to change without further notice.

3.2 Report Availability

Reports are created and available to different groups of members.

Available for	Description
clearing and trading members	Each trading member receives a report containing its individual data. Each clearing member receives a report containing his individual data and the data of its associated trading members.
trading members only	Each trading member receives a report containing its individual data.
clearing members only	Each clearing member receives a report containing his individual data and the data of its associated trading members.
all members	Each member receives the report containing identical data. <u>Please note</u> that such reports do not have a member specific header.

Table 3.1 - Report Availability

3.3 Structure Cardinality

Any substructure may be contained zero, one or multiple times in a structure.

The XML report descriptions contains a cardinality information for each structure in the form structure

or

structure, repeated *cardinality* times:

Cardinality	Description
(none)	Substructure occurs exactly one time
<i>m</i>	Substructure occurs exactly <i>m</i> times
<i>m ... n</i>	Substructure occurs minimal <i>m</i> , maximal <i>n</i> times
<i>m ... variable</i>	Substructure occurs <i>m</i> to any number times

Table 3.2 - Structure Cardinality Descriptors

3.4 Usage Code

The XML report descriptions contain usage codes for each tag. These codes provide information on whether a tag is mandatory or optional. *Table 3.3* below lists all applicable usage codes and provides a description.

Usage Code	Explicit	Field Usage Description
m	mandatory	Tag occurs always (but may contain an empty string)
o	optional	Tag may be omitted

Table 3.3 - Field Usage Codes

4 XML Report Descriptions

4.1 CA Capital Adjustment

4.1.1 CA752 Capital Adjustment Positions Overview

Description	This C7 report contains all changes of contract specifications for existing regular and LEPO series as well as contract specifications of new series that are added after capital adjustments. In the case of a capital adjustment, the system generates new contract versions. Adjusted series have their existing version number incremented by 1. Newly created series contracts have the version number 0. The displayed series information is sorted by underlying and by type of capital adjustment. In addition the report contains information on flexible contracts.
Frequency	Capital adjustment.
Availability	This report is available for clearing and trading members.

4.2.3 CB012 Account Statement

Description	This C7 report lists the opening positions in the option series and futures for flexible and standard contracts, the daily position movements at a transaction level and the up to date positions in the individual accounts of the exchange member. For each transaction, the report contains the variation margin payments for futures contracts, the premiums on options calculated in the "traditional" way and the variation margins for "futures-style" settled options. The report displays detailed position data according to currency, account and product. Premiums and variation margins are added per series of an option class (Call/Put) or a futures contract. Totals are calculated per product and account in product currency. In addition the report contains information on flexible contracts.
Frequency	Daily.
Availability	This report is available for clearing and trading members.

4.2.6 CB167 Late Closing Fees

Description	This report displays the Late Closing Fees incl. the respective details to the zero cost quantity. The Late Closing Fee is charged when position closing adjustments are entered after the defined time limit and the quantity of the entered position closing adjustment exceeds the defined zero cost quantity. This report is organized by member, account and contract. It lists all member positions for products for which a late closing fee in the corresponding currency is charged. For every contract, fee relevant transactions entered before and after the time limit are shown separately. The time limit indicates the time from which position closings for positions resulting from the previous business day are chargeable. The field RESULT ZERO COST QTY shows the zero cost quantity for the next business day. If the amount is negative, the fee is calculated and the zero cost quantity is zero.
Frequency	Daily.

4.2.27 CB702 Cash Settled Contracts Overview

Description	This C7 report shows the cash settled index options on exercise/ assignment day as well as the cash settlements resulting from exercise/assignment of stock options and cash settled options on futures.. For options on index the cash settlement amount of the net position is calculated by evaluating the strike prices for exercised options against the final settlement price. For cash settled options on futures the cash settlement of the net position is calculated by evaluating the strike price against final settlement price of the corresponding futures instrument. For cash settled stock options the cash settlement of the deliverable position is calculated by multiplying the difference of strike price and underlying close price by the number of underlying shares. Detailed security related information about the corresponding delivery is reported in CE770 report. The report may contain cash settlements resulting from exercise/assignment of a basket created due to a spin-off. The individual results are added for each currency, per contract, product and account. In addition the report contains information on flexible contracts.
Frequency	Daily.

4.3.5 CD033 Collateral Composition

Description	This report shows the difference between the evaluated and limited collateral security value and the margin requirement. The collateral values are shown per security group and currency. The values are converted to the clearing member currency and added up per security group ("B" for bonds, "S" for stocks, "C" for cash). All collateral values are converted into the corresponding clearing member currency and added up per security group. These totals are then possibly cut by the limit factors defined by Eurex, added up and compared against the total margin requirement of the clearing member. Only for fully segregated DC Market Participants this report will contain data. For omnibus segregated DC Market Participants as well as not segregated DC Market Participants this report will always be empty.

4.3.7 CD042 Daily Settlement Statement

Description	This report describes the daily settlements. It lists the necessary margin requirements, pledged cash and security balances and the cover credits and debits. The "over/under" cover values by currency are converted into the collateral pool currency and summed to calculate the net margin profit or deficit. Only for fully segregated DC Market Participants this report will contain data. For omnibus segregated DC Market Participants as well as not segregated DC Market Participants this report will always be empty. Entries for currencies with empty (zero) values will be omitted. However, the entry in the collateral pool currency will be available. i.e: If all the following fields are with zero value for a non-clearing currency (recA_secuTotBalAmnt), (recA_guarTotBalAmnt), (recA_cshCollAmnt), (recA_mgnReqrAmnt), the entire row will be omitted.

4.3.8 CD044 Daily Client Collateral Allocation

Description	This end-of-day report shows the allocation between direct client's (Collateral Direct Clients) and indirect client's collateral (Collateral Indirect Clients) for each Pool ID of a Clearing Member. The value of the collateral will be displayed for each client account and aggregated for all direct clients and all indirect clients on a collateral pool level. The value of the allocated collateral is denominated in the collateral pool currency. If the collateral pool holds collateral for clients in excess of the total margin requirement, this will be reported separately as collateral surplus. In case more than one collateral pool is assigned to a clearing member then the results are consolidated in a single report. This report is available for clearing and DCs with member ID. For fully segregated DCs with Member ID this report will contain data. For omnibus segregated DCs with Member ID this report will always be empty.

4.3.9 CD045 LSOC Settlement Statement

Description	The report displays margin requirements and LSOC specific collateral values. The relevant collateral values are Legally Segregated Values (LSVs), FCM Buffer, Unallocated Excess (UE) and Assumed Allocation (AA). UE is displayed for information only. The LSOC Net Margin Surplus value ("IsocNetMgnSrpl") corresponds to the margin call issued to the FCM master pool in case it is negative. In case it is positive and the calculation model variable ("calcModel") is "without-Excess", it corresponds to the unused FCM Buffer ("fcmBuffer") of FCM master pool. In case it is positive and the calculation model variable ("calcModel") is "withExcess", it corresponds to the unused AA of FCM master pool ("assAlloc"). The Used FCM Buffer (usedFcm-Buffer) value displays the amount of the FCM Buffer that has been used to cover margin requirements. The report assumes a master pool to sub pool relation with one FCM master pool (i.e. type "LSOCMaster") that is assigned to one or more FCM Client sub pools (i.e. type "LSOCSub").

4.3.12 CD230 Monthly Interest Report

Description	This report shows the interest earned on cash collateral held with Eurex Clearing or ECC and the respective cash handling fee, summed up for each calendar day, and aggregated for the month. The report is generated per pool ID ('poolID'), type of money ('typeOfMoney') and currency ('currTypCod') once the interest is calculated and posted. The report shows the ending balances of the interest earned on cash and the cash handling fee ('intErnCshBalAmnt', 'feeCshBalAmnt'), the applied interest and fee rates ('intErnRatPct', 'feeRatPct'), the calculated values of the interest and fee for each calendar day ('dlyInErnAmnt', 'dlyFeeAmnt'), their sum ('dlyIntAmnt'), and an overall value for the month ('sumCurrDlyIntAmnt'). It also shows the accrued net interest to date ('aggAmntToDate'). In addition, the report shows the details of the effective transactions at CM level ('trnCshTypCod', 'trnValDat', 'trnAmount'). The outcome can be either i) credit of interest earned after deduction of the cash handling fee (if 'trnAmount' is positive) or ii) a payment to Eurex Clearing or ECC (if 'trnAmount' is negative). The cash handling fee is not applicable to ECC. The CM's version of the report contains all pools of the CM and its DC Market Participants at ECAG as well as all pools of their ISA Direct members at ECAG. The ISA Direct members at ECAG will receive the report displaying their pools. The data at DC Market Participant level is provided only if they are fully segregated. For other clients the report will be empty.

4.3.13 CD231 Daily Preliminary Interest Report

Description	This preliminary report shows the interest earned on cash collateral held with Eurex Clearing or ECC and the respective cash handling fee, summed up for each calendar day, and aggregated to date. The report is generated per pool ID ('poolID'), type of money ('typeOfMoney') and currency ('currTypCod') and is provided every business day. The report shows the ending balances of the interest earned on cash and the cash handling fee ('intErnCshBalAmnt', 'feeCshBalAmnt'), the applied interest and fee rates ('intErnRatPct', 'feeRatPct'), the calculated values of the interest and fee for each calendar day ('dlyInErnAmnt', 'dlyFeeAmnt'), their sum ('dlyIntAmnt'), and the accrued value for the current month ('sumCurrDlyIntAmnt'). It also shows the accrued net interest to date ('aggAmntToDate'). In addition, the report shows the preliminary details of the expected transactions at CM level ('trnCurrTypCod', 'trnAmount'). The outcome can be either i) credit of interest earned after deduction of the cash handling fee (if 'trnAmount' is positive) or ii) a payment to Eurex Clearing or ECC (if 'trnAmount' is negative). The cash handling fee is not applicable to ECC. The CM's version of the report contains all pools of the CM and its DC Market Participants at ECAG as well as all pools of their ISA Direct members at ECAG. 4.5 CI Intraday Reports

4.5.1 CI012 Account Statement

Description	This C7 report lists the opening positions in the option series and futures for flexible and standard contracts, the daily position movements at a transaction level and the up to date positions in the individual accounts of the exchange member. For each transaction, the report contains the variation margin payments for futures contracts, the premiums on options calculated in the "traditional" way and the variation margins for "futures-style" settled options. The report displays detailed position data according to currency, account and product. Premiums and variation margins are added per series of an option class (Call/Put) or a futures contract. Totals are calculated per product and account in product currency. In addition the report contains information on flexible contracts.
Frequency	Intraday.

4.5.2 CI238 Intraday Concentration Add-On Fee Info

Description	The intraday Concentration Add-on Fee information statement reports the Add-on minimum required cash amount that must be delivered by the end of the day to avoid the Securities Collateral Concentration Add-on Fee for that day. The required cash amount/balance is calculated based on the cash ratio threshold of the aggregated margin requirement for the add-on included pools of the corresponding group(s). For the calculation, the latest available figures are used before the report is created as of around 4:00 PM CET. The report is available even no fee is applied by Eurex Clearing.
Frequency	Intraday.

5 Introduction to Report Tag Descriptions

This is a description of the tags of XML reports. An overview of the tag descriptions is given first.

5.1 Tag Characteristics

The characteristics of each tag are detailed giving the following information.

Description	A short description of the tag's functional meaning.
Format	Defines the format and size of the tag. <i>Table 5.1</i> describes common formats for tags.

Format	Description	Example
alphanumeric n	Text of maximal length n, stored as string.	A tag with format "alphanumeric 6" may contain the values "TRD001" or "ABC" or "".
numeric n [, m]	Number with n significant digits and, if given, precision m. The number is stored as a string containing the decimal point if applicable.	A tag with format "numeric 5, 2" might contain the values "314.15" or "3.14" or "0.00".
numeric signed n [, m]	Signed number with n significant digits and, if given, precision m. The number is stored as a string, negative values prefixed with the "-" sign and containing the decimal point if applicable.	A tag with format "numeric signed 5, 2" may contain the values "314.15" or "3.14" or "-314.15" or "0.00".
DateFormat	Date, stored as a string in the format CCYY-MM-DD	A DateFormat tag may contain the value "2005-03-28".
TimeFormat	Time, stored as a string in the format hh:mm:ss.cc	A TimeFormat tag may contain the value "23:59:59.99"
TimeFormat18	Time, stored as a string in the format hh:mm:ss.cc.ccc.ccc	A TimeFormat tag may contain the value "23:59:59.99.999.999"

Table 5.1 - Tag Formats

Valid Values	Some tags have a predefined limited set of values they may contain.
Decodes	The decoded literals belonging to the valid values constants as used in the generic text reports.
Descriptions	A short description of the value's functional meaning.
Where used	A reference to the XML reports which contain this tag in their structure.

5.2 Tag XSD Data Type and Schema notation

The following table describes XSD data type and schema representation with example values.

Format	Example Report field Definition	XSD Data type	XSD Schema	Example Schema
alphanumeric n	alphanumeric 6	string	Data type is String and maxLength value is 6	<pre><xs:simpleType name="alphanumeric_field"> <xs:annotation> <xs:documentation>This field contains alphanumeric string.
