Corporate Action	Special Dividend
Company	Compagnie Financière Richemont SA
ISIN	CH0210483332
Rules&Regulations	Contract Specifications for Futures Contracts and Options Contracts at Eurex Deutschland, section(s) 1.6.7 (2), 1.13.8 (2), 1.26.11 (2), 2.6.10.1 (2)
Options contracts on stocks	CFR, CFRE
Futures contracts on stocks	CFRL, CFRQ
Futures contracts on dividends of stocks	C5FR

The company Compagnie Financière Richemont SA has announced the payment of a special dividend of CHF 1.00 per share in addition to a regular cash dividend of CHF 3.30 per share.

More information about this dividend payment is available on the company's website.

The payment of the special dividend will result in an adjustment of the above-mentioned contracts.

Procedure

R-Factor Method

Determination of adjustment factor (R-factor)

S1	Closing auction price of the share
S2	S1 minus regular dividend
S3	S2 minus special dividend
R-Factor	S3/S2

Options

1. Adjustment of strike prices and contract sizes

- All existing strike prices will be multiplied by the R-factor. Strike prices will be rounded using mathematical rounding conventions to the number of decimal places according to their listing standard.
- The contracts size will be divided by the R-factor. In case the adjustment of the trading unit results in a lot size that is not an increment of one share, the adjusted lot size will be rounded to the nearest whole share. An equalization payment will be made to neutralize the effect of rounding.
- The version number of the existing series will be increased by one.
- Immediately after close of trading on the last cum-trading day, adjusted strike prices and contract sizes will be published on www.eurex.com in section

Rules & Regs > Corporate actions > Corporate action information

- New series with standard contract size 100 and version number 0 will be introduced effective the ex-date.
- All existing orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible options. The existing flex strikes will be rounded using mathematical rounding conventions, to four decimal places.

Futures

1. Adjustment of contract size and variation margin

- The adjustment is done via the same R-factor as for the Options
- To adjust the calculation of the variation margin of the following exchange trading day, settlement prices of the last cum-trading day will be multiplied by the R-Factor.
- The new contract size will be calculated as follows: $\text{Contract size new} = \text{contract size old} / \text{R-factor}$
- All outstanding orders and quotes will be deleted after close of trading on the last cum-trading day.
- The adjustment also refers to existing positions in TES flexible futures.

2. Introduction of a new contract

- New single stock futures contracts with standard contract size 100 and new futures contracts on dividends with standard contract size 1000 will be introduced.
- The exact introduction date will be published via a circular.
- Once there is no more open interest in the adjusted contracts, trading in these contracts will be discontinued.
- Furthermore, no new contract months will be introduced in the adjusted contracts.

Should there be no open interest in the affected contracts on the last cum-trading day after close of trading, these contracts will not be adjusted, and no successor contracts will be introduced.
